Table tags

<table> Tag:

Used to define main table layout, and specifies start and the end of the table structure.

<tr> Tag:

Used to define row inside the table, and Specifies row start and end.

<td> or <th> Tag:

Used to define columns inside each row, and this tag contains cell data.

<th> used with the header cell and make it centered and bold.

Computer Models

Manufacturer	Model	Price
Dell	XPS 15	\$1500
HP	Spectre x360	\$1300
Apple	MacBook Air	\$1200

Text in cells formatted with the **<th>** tag is bold and centered above each table column.

HTML Layout Techniques:

- HTML tables
- CSS float property
- CSS framework
- CSS flexbox

⊗ The <table> element was not designed to be a layout tool! The purpose of the <table> element is to display tabular data. So, do not use tables for your page layout! They will bring a mess into your code.

☐ You can use div, span and HTML5 layout elements along with CSS for pages layout instead of tables.
